

**DANTCO DUAL SHAFTS
MIXER/DISPERSER
TANK MOUNTED
POST MOUNTED**

The Dantco Dual Shaft Mixer/Dispenser will increase productivity and versatility of high viscosity batch processing. This system produces swift dispersions in applications from paste inks to coatings, plastisols, adhesives, caulking compounds, and specialty chemicals.

The Dual Shaft Mixer/Dispenser are available in Tank Mounted or Post Mounted configurations, in fixed or variable speeds, with mechanical drives or electronic drives. Models range from laboratory sizes to pilot line sizes to production sizes with tank capacity exceeding 3000 gallon with up to 200 HP electric motors.

The Dual Shaft Mixer/Dispensers may be supplied with several features which will add to versatility and economy. Features such as vacuum/pressure operation, choice of interchangeable mixing vessels, choice of fixed and portable vessels with heating/cooling jackets or external pipe coils for hot oil heating, choice of drives, choice of low speed anchor or helical turbines. A stator/rotor dispersing head may be added for superior high shear results. Wetted stainless parts may be polished to more than 240 grits.

Contact Dantco by e-mail, fax or telephone to-day. Your request for quotes will be handled swiftly.
